

EDUCATION

Seneca Polytechnic

Honours Bachelor of Technology – Software Development (BSD)

Newnham Campus, Toronto, ON

Start Date: 2022 - Expected Graduation: 2026

- **Relevant Coursework:** Data Structures and Algorithms, Data Analysis, Database Management, Web Development, System Design, Information Security, Operating Systems, Multimedia Interfaces, Software Engineering, Business Technology Design
-

SKILLS

- **Programming Languages:** Python, C, C++, Java
 - **Web Development:** Django, Flask, JavaScript, HTML, CSS, React
 - **AI Tools:** Research in AI-powered tools for test generation
 - **Databases:** SQL, NoSQL, MongoDB, PostgreSQL
 - **Operating Systems/Platforms:** Unix, Windows, Microsoft Office, AWS, Azure
 - **Tools & Technologies:** Git, GitHub, Jira, Visual Studio, VS Code, Figma, Android Studio, QT, Agile, Scrum
 - **Software Development:** Unit tests, RESTful Services, APIs, Object-Oriented Programming (OOP)
 - **Collaborative Teamwork:** Proven experience working in team environments to solve real-time problems and improve workflows
 - **Communication:** Excellent written and verbal communication skills
-

WORK EXPERIENCE

Student Ambassador

Seneca Polytechnic, North York, ON, Canada

September 2023 - December 2023

- Engaged with prospective students and visitors, providing detailed information about Seneca College programs, campus facilities, and student life.
- Assisted in organizing and facilitating orientation sessions for new students, contributing to a positive and informative onboarding experience.
- Utilized strong interpersonal and communication skills to connect effectively with diverse groups of students and parents.

PROJECTS

Hackathon Participant

Seneca Polytechnic – Housing Hackathon, Toronto, ON

July 2024

- Collaborated with a team to develop a data-driven solution for housing challenges.
- Applied analytical and problem-solving skills to create a project integrating technical and business solutions.

Stock Price Prediction Dashboard

- Built an advanced analytics platform for stock market insights using Python, leveraging LSTM with an attention mechanism for price prediction.
- Integrated technical indicators (RSI, MACD, Bollinger Bands) and real-time news sentiment analysis.
- Designed an interactive dashboard using Streamlit for visualization and analysis of predictions.
- Achieved actionable insights with features like confidence intervals, trend identification, and market sentiment correlation.

Movie Watchlist Application

- Developed a movie watchlist application using Django, featuring scalable database architecture and integrating IMDb API for comprehensive movie data retrieval.
- Implemented secure user authentication using Django's built-in authentication system, enabling features like registration, login, and account deletion.
- Incorporated seamless watchlist management for adding, viewing, and removing movies, enhancing personalized user experiences.

Listing API

- Developed a RESTful API using Express.js and JavaScript to manage and retrieve listings.
- Implemented JSON Web Tokens (JWT), enhancing login efficiency and resulting in an improved user experience for over 3,000 monthly active users on the platform.
- Integrated role-based access control (RBAC) within the CLI, ensuring secure operations and appropriate user permissions for creating, reading, updating, and deleting listings.
- Developed a command-line interface (CLI) for managing and retrieving listings, improving usability and efficiency for users managing large datasets.
